

General: choose topic of your website, for example: (Instagram, VK, Facebook, News portal and etc. )  
Your web application must consist of following pages:

Admin pages: CRUD

- Create (admin/create.html)
- Retrieve (admin/list.html)
- Update (admin/update.html)
- Delete (no page required)

User pages:

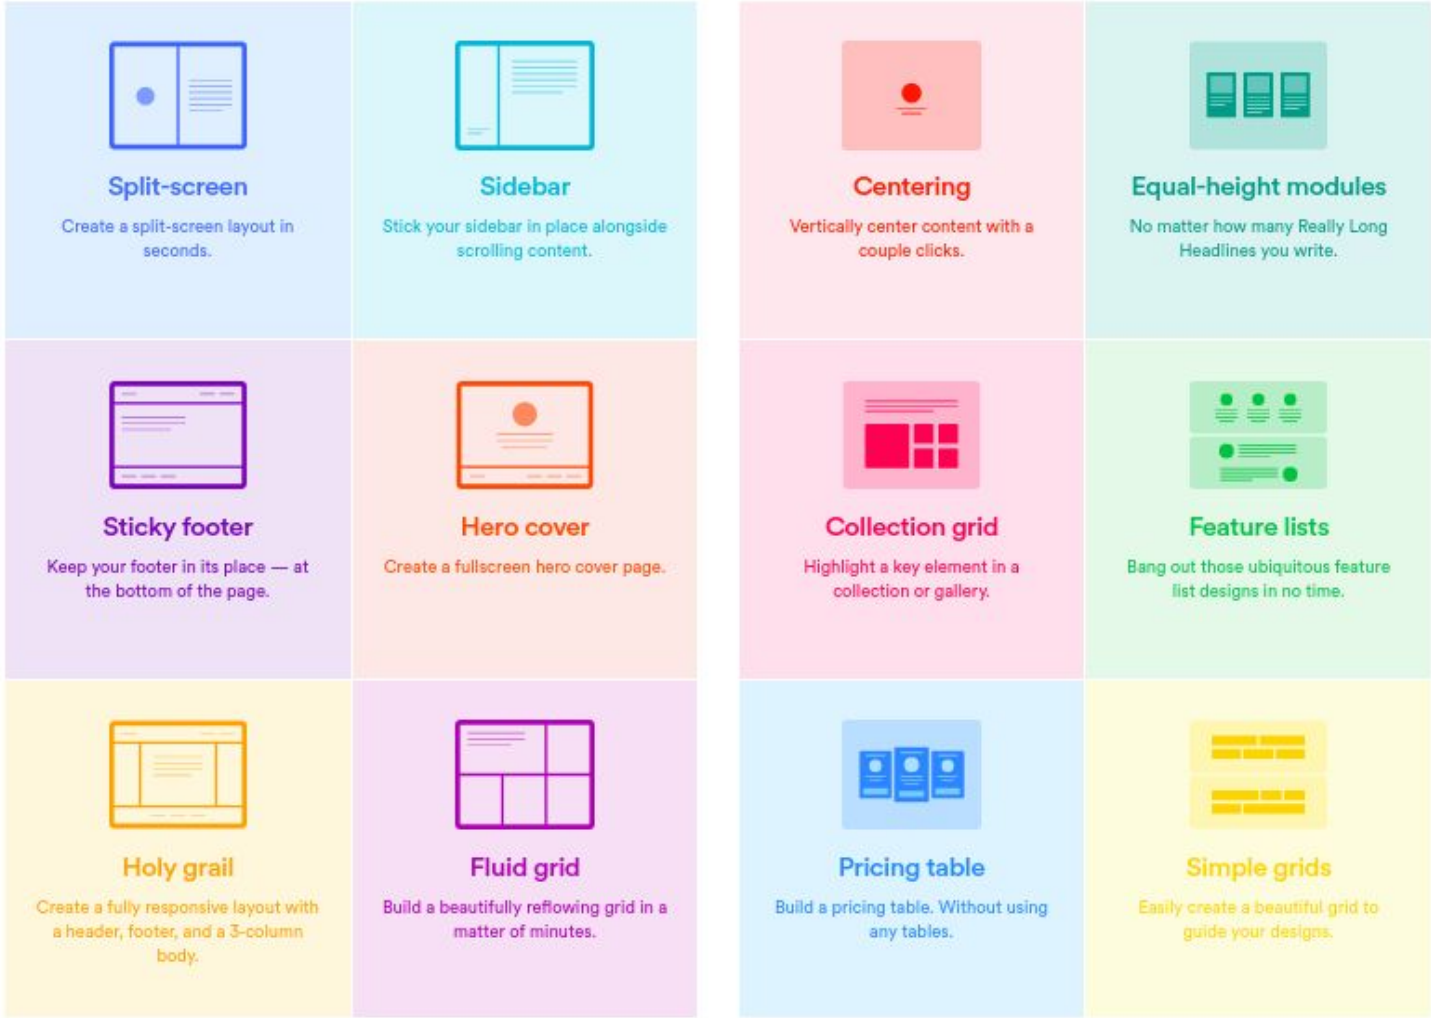

- List of elements (items.html)
- Item details page (details.html)
- Promo page (index.html)
- Gallery or Slideshow page (slide.html)

## Part #1: Layout

*(Until week #6)*

- For layout purposes use display:flex (no float, no bootstrap)
- Pages must be mobile-friendly

Use at least 8 techniques of following techniques described in (<https://flexbox.webflow.com/#examples> )

## Part #2: Javascript

*(Until Week #8)*

- Forms must have validation, with showing errors,
- Items must be loaded by fetch requests
- List of items, must have filters, pagination,and load details page without reloading page
- Bookmarks must work, using cookies to store data

## Part #3: Backend

*(Until Week #11)*

Implement following backend functions on any backend functions (PHP, Python and etc.)

- CRUD: It must be possible to store following actions (Create, Retrieve, Update, Delete)
- Retrieve must have filtering requests
- When creating elements, it must show errors, if some of fields are not correct
- Use cookies and sessions to store bookmarks, and authorize users
